## **ferrylines.com goes mobile**

**The well established ferry website, ferrylines.com, goes mobile! For 10 years now the leading ferry page has been continuously working on improvements and there's no stopping it!**

Ferrylines.com offers its users the most comprehensive and up-to-date web portal for ferry trips in all of Europe. As the starting point of every holiday and ferry trip, it has become indispensable in the last 10 years. Not only can tourists and business travellers plan optimal itineraries, they can also book them online. In 2012 the webpage was completely redone. Special attention was given to the map collection, which was redesigned in order to make it interactive and easy to use.

Ferrylines.com has changed, just like its customers: the number of mobile users has constantly been increasing. The webpage operators have, therefore, confronted the current demands of the market and developed a mobile version of ferrylines.com, which focuses on the core features: direct search, quick and clear results. The user can make an immediate decision and book his ferry online, where ever he may be. As always: up-to-date, comprehensive and in nine languages.
