Ferrylines.com goes World!

Ferrylines.com is Europe's most comprehensive ferry website. Eleven years after its introduction into the market, its founders have set themselves a new challenge: ferrylines.com goes World!

In July 2015 the time has come: with 5,566 routes from 570 shipping companies, all the salt water ferries in the world are depicted. The core of the ferry website, the extensive ferry databank, now includes 2,160 ports and 820 islands from 120 coastal countries (...Samoa, Samos, Samsø, Samui...). No other ferry website offers more up to date information on ferries. ferrylines.com has just enhanced its unique selling point even more.

The ferry website, which was established in 2004, is available in 9 languages and was just adapted for smartphones in 2014. „The project is a little insane,“ admits ferrylines.com owner Oliver Kowalski, „but we can only go forward and make room for the other projects in the pipeline. Besides it's great fun to scan the world for salt water ferries and provide this know-how to world travellers.“
